SUMMARY

Full-stack software engineer (TypeScript, NestJS, React/Next.js) who owns production systems end-to-end. Primary developer of a competition platform's admin console, backend APIs, and payment stack, and sole builder of a Laravel affiliate/payout portal.

EDUCATION

Bulacan State University - BS Information Technology

2020 - 2025

Relevant Coursework: Software Engineering, Database Systems, Artificial Intelligence

WORK EXPERIENCE

Crystal Vision - Software Engineer, Full-Stack | Remote

Aug 2025 - Present

Rola Competition Platform (Full Stack)

- Let operations staff run the entire competition lifecycle judging, moderation, payments, analytics without engineering involvement, as sole developer of the admin console (**34 modules, 47 pages**; Next.js/React).
- Primary developer of the backend powering both the admin console and the mobile app **37 modules, 200+ REST endpoints, 61 data models** (NestJS).
- Enabled the platform to accept crypto and fiat entry payments **without double-charging users**, integrating **2 payment rails** (on-chain USDC on Polygon + Xendit).
- Protected contest-result integrity against vote manipulation and race conditions under load, with a **concurrency-safe voting engine** (per-user and per-IP rate limiting).
- Gave the business self-serve visibility into users, revenue, and engagement through **9+ analytics dashboards** with CSV export.
- Built an **agentic Claude Code development harness 8 subagents** (code review, test generation, debugging) plus secret-scanning and pre-commit guardrails that blocks secret leaks and unsafe DB writes before they reach production.

KOL Dashboard (Full Stack)

- Gave the company one system to run its entire **KOL/affiliate program**, building and owning a Laravel 12 portal with a schema designed from scratch (**16 models, 23 migrations**).
- Automated affiliate commission and payout approvals so finance no longer reconciled them by hand, building a payout state machine with role-based approval across **4 access levels**.
- Kept sensitive user and payment data emails, names, wallet addresses **out of the UI, logs, and exports**, with a reusable masking layer (**25 unit tests**).

RR Remo Trucking - Software Engineer (Full Stack) | Freelance

May - June 2026

- Built an AI-assisted logistics site (Next.js/React, Groq LLaMA 3.1) that automated customer support and lead capture.

Smart-Lift AI - Software Engineer (Full Stack) | Personal Project

March - April 2026

- Built a full-stack fitness platform (Next.js, NestJS, Prisma, MySQL) with training, nutrition, and role-based access.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, PHP, SQL, HTML, CSS

Frameworks: NestJS, Node.js, Express, Next.js, React, Redux Toolkit, RTK Query, Laravel, Tailwind CSS

Developer Tools: MySQL, Prisma, Sequelize, Redis, JWT, RBAC, Jest, Playwright, Pest / PHPUnit, Git, GitHub, Docker, AWS S3, Postman, Jira, CI/CD
