SUMMARY

Full-stack TypeScript engineer (NestJS, Next.js) who builds and operates production systems end to end: the admin console for a live song competition with 574 active users, a fiat payment rail, and a Laravel affiliate portal. Author of *provenly*, an open-source verification layer that makes AI coding agents prove their work.

WORK EXPERIENCE

Crystal Vision - *Software Engineer, Full-Stack | Singapore (Remote)* *Aug 2025 - Present*

- Let operations staff run judging, moderation, payments and analytics unaided, as sole developer of the 52-module admin console for a live song competition with **574 active users**.
- Closed a fail-open authorisation hole leaving **115 of 123 API endpoints** role-unchecked, by registering the guard globally and defaulting undecorated routes to admin-only.
- Recovered paying entrants left unregistered by a mid-confirm worker crash: **all 5 queue retries** dead-ended at a duplicate-job return until I moved the upsert above it.
- Took the console from **0 tests to a 251-test gate** that fails the build on any new red, across 110 unit suites and 69 Playwright end-to-end specs.
- Built an in-house Claude Code harness that ledgers every file edit and verification command, and blocks any agent "tests passed" claim the record cannot support.
- Replaced manual commission and payout reconciliation with a Laravel 12 affiliate portal owned end to end, authoring **15 of its 17 migrations** and a 16-model schema.

RR Remo Trucking - *Software Engineer, Full-Stack | Philippines (Freelance)* *May - June 2026*

- Sole author of a trucking company's site assistant: Groq LLaMA 3.1 grounded in a fixed fact sheet, refusing to invent a price, address or delivery date.

OPEN SOURCE

provenly - *Author & Maintainer | github.com/Heisenbergl8/provenly* *2026*

Reliability infrastructure for AI coding agents. MIT, zero dependencies, any language, installed with one npx command.

- Blocks the "false green" failure where an agent reports tests it never ran, by checking each claim against a ledger of what actually executed.
- Halts a thrashing repair loop at **3 unchanged failure fingerprints** with a written report, while genuinely converging fixes run uninterrupted.
- Contains an unattended agent with **5 PreToolUse guards** covering destructive commands, secret leaks, unsafe commits, out-of-scope writes and cross-session locks.

PROJECTS

Primolar - *Sole Developer | NestJS · Prisma · MySQL · Next.js · AWS CDK* *2026*

- Built a multi-tenant clinic SaaS alone: an API with **53 data models and 142 routes**, a Next.js web app and shared Zod schemas in a pnpm monorepo, with about **2,150 tests**.
- Wrote AWS CDK stacks (ECS Fargate, RDS) and a GitHub Actions deploy that signs in with OIDC, no stored keys. A pilot by 9 AI tester personas ran **469 UI tests**; I fixed all 13 bugs it found.

EDUCATION

Bulacan State University - *BS Information Technology* *2020 - 2025*

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript, PHP, SQL, HTML, CSS
Frameworks:	NestJS, Node.js, Next.js, React, Redux Toolkit, RTK Query, Laravel, Tailwind CSS
AI Engineering:	Claude Code (hooks, subagents, skills), agent guardrails & evaluation, LLM tool orchestration, Groq / LLaMA, prompt engineering
Developer Tools:	MySQL, Prisma, Sequelize, Redis, BullMQ, JWT, RBAC, Jest, Playwright, Pest / PHPUnit, Git, GitHub, Docker, AWS S3, Postman, Jira, CI/CD
